

Craft Stick Bird Feeder

Materials Provided:

Craft sticks
Pipe cleaners
Bird seed

Materials From Home:

Strong glue

Build the base of the feeder by placing the popsicle sticks next to each other and then gluing a craft stick across the bottom of the base sticks. Repeat with another stick across the top. These two sticks will help hold the base sticks together.

For the next layer, glue a popsicle stick perpendicular to the two sticks you glued on the base in the previous step. Repeat for the other side.

Continue stacking and gluing the popsicle sticks around the outside to form the four walls, alternating directions each layer. Stop when you reach the desire height for your bird feeder.

Glue the walls of the bird feeder to the bottom.

Once the glue is dry, slip the pipe cleaners into the little spaces between the slats, fill it with bird seed and hang it from a sturdy branch.
